Education

Sant Longowal Institute of Engineering and Technology (SLIET) — Punjab, India
B.E. in Computer Science and Engineering – SGPA 8.60 — 2026

Delhi Skill and Entrepreneurship University (DSEU) — New Delhi, India
Diploma in Digital Electronics

Projects

Zeitaku | *TypeScript, TypeScript Compiler API, Playwright, Chrome DevTools Protocol, Vitest* — GitHub

- Built a codemod on the **TypeScript Compiler API** that finds hard-coded `waitForTimeout` sleeps in Playwright tests and splices in network-aware waits while preserving the file's formatting.
- Replaced fixed sleeps with **Chrome DevTools Protocol** request tracking: on throttled Slow 3G, fixed 2 s and 3 s sleeps failed **100%** of runs while Zeitaku failed **0%**; **45% faster** than a safe fixed wait on a normal network.
- Scanned **7 open-source codebases (76k files)** and found **240** hard-coded sleeps; AST classification leaves alone the **44** that guard "should not happen" assertions.

Junban | *TypeScript, Chrome DevTools Protocol, Playwright, delta debugging* — GitHub

- Built a tool that finds the **order of API responses** that breaks a flaky Playwright test: it holds each response in the browser (CDP `Fetch` domain) and releases them in chosen orders.
- On races that appear only a few times in a thousand runs, it caught **6/6** planted bugs by the **5th run** each, while plain reruns caught **2/6 in 3,000 runs**.
- Shrinks each failure to one rule with **delta debugging** and writes a plain Playwright repro test that failed **20/20** times for every bug; includes a report UI with drag-to-replay.

DocMind | *Python, FAISS, sentence-transformers, Tesseract OCR, Llama 3.3 (Groq), Streamlit* — Live Demo | GitHub

- Built and deployed a **RAG** app that answers questions about any PDF, running **OCR only on pages without a text layer** so digital PDFs process in seconds.
- Added a retrieval relevance guard that answers "I don't know" **without calling the LLM** when no chunk matches, and shows sources with similarity scores.

HalluGuard + Kensa | *Python, PyTorch, Hugging Face, NLI* — Live Demo | GitHub | Kensa

- Built a per-sentence hallucination detector for RAG answers; moved from cosine similarity to an **NLI cross-encoder (DeBERTa-v3)**, benchmarked on **RAGTruth** with thresholds tuned on the train split only.
- Built **Kensa**, a metamorphic test runner for RAG apps (reword, add distractor, delete evidence, edit the fact) that **delta-debugs** each failure to the minimal documents causing it.

Research

ML Research Project — IIT Jammu
Under Dr. Shaifu Gupta

- Built a machine learning research project for IIT Jammu under the guidance of Dr. Shaifu Gupta.

Open Source

Google Chrome DevTools MCP | *TypeScript, Puppeteer, CDP* — PR #3144 | PR #3145

- Fixed emulation pinning pages to latitude/longitude 0,0 (now clears the override over CDP) and replaced a bare Lighthouse `INVALID_URL` with an actionable error; each with a real-browser regression test.

Browserbase Stagehand & **Documenso** — PR #3175 | Issue #3445

- Stagehand: fix to the network-idle wait. Documenso: reported 26 redundant E2E sleeps found by AST analysis, keeping the ones that guard negative assertions.

Technical Skills

Languages: TypeScript, Python, Kotlin, JavaScript
Testing & Browser: Playwright, Chrome DevTools Protocol, Vitest, GitHub Actions, TypeScript Compiler API (AST)
ML & RAG: PyTorch, Hugging Face, sentence-transformers, FAISS, LangChain, NLI cross-encoders, TensorFlow Lite
Tools: Git, Node.js, Express, Streamlit, Tesseract OCR, Linux

Achievements

- **RedBus Data Decode Hackathon:** Top 500 of 8,000+ teams.
- **NCC "C" Certificate** (National Cadet Corps).
